

Attention Camp Road & Unpaved Private Road Residents

Free Advice on Proper Road Maintenance

The Maine Department of Environmental Protection and the Soil & Water Conservation Districts are teaming up to offer free technical assistance to a limited number of road associations around the state.

★ **What would our road association get?** Staff from a participating Soil & Water Conservation District will evaluate your road and develop a road maintenance plan that includes suggestions for fixing problem areas and cost estimates.

★ **Who can qualify?** Any existing road association on an unpaved private road in a lake watershed.

★ **What does a road association need to do?** The association commits to working with the District, hosting a road association meeting, and at a minimum, a board meeting to review the plan when complete.

★ **What is the cost?** The assistance will be **free** to the selected road associations.

★ **To apply or to learn more:** Contact Kathy Hoppe at Maine DEP
Kathy.M.Hoppe@Maine.gov or 207-760-3134

While road maintenance isn't rocket science, there is science and engineering behind good road construction and maintenance.

The single largest pollutant to Maine lakes is soil and the greatest source is private unpaved roads. Your actions can make a difference.
